

Step 1: Create a configuration file i.e., ***apple-app-site-association***.

Step 2: install yarn

<https://classic.yarnpkg.com/en/>

Step 3: Generate a project with,

> *yarn init*

Step 4: Add express: It's an fast, minimalist web framework

> *yarn add express*

Step 5: Copy-paste the ***apple-app-site-association*** file in this project folder.

Step 6: Create the **index.js** file

Step 7: Create **home.html**

Create **about.html**

Step 8: Spin our server

> *node index.js*

Step 9: Install [ngrok](https://dashboard.ngrok.com/get-started/setup) on local machine.

<https://dashboard.ngrok.com/get-started/setup>

Step 10: Open Terminal -> Go to the ngrok executable binary path -> run

> ./ngrok http 80

Step 11: 1Let's go back to our application which we have created and associated with our site.

We left after adding the Capabilities i.e., Associated Domains.

Now just go back and add the **ngrok domain name with prefix *applinks*:**

Run the below command in terminal,

**> xcrun simctl openurl
booted <https://1bd39880fbad.ngrok.io>**
